

LearnerShape

We are building and deploying the world's leading *open source learning infrastructure* – modular microservices that can be combined and augmented to deliver customized learning applications

Key Features

- All functions can use any skills framework and definitions
- AI-based recommendation of content, jobs and people (<https://github.com/LearnerShape/lsgraph>)
- Recording skills to blockchain as verifiable credentials (<https://github.com/LearnerShape/l-auth-api> and <https://github.com/LearnerShape/l-auth-ui>)
- Content generation with generative AI (e.g. GPT-4)
- Flexible visualization of individual and organizational skills and learning progress

Additional microservices under development

Use Cases

- Recommending the right content to teach specific skills
- Recommending the right people for jobs requiring specified skills
- Choosing a future job, career or course of study based upon current and planned skills
- Tracking organizational skills for specific tasks
- Many more! – organizational needs/creativity are only limits
